

Aluminium@ alloy - contains silicon, and either magnesium@, copper@ or nickel@ with titanium@, zirconium@ and vanadium@ to increase hot creep resistance

Patent number: FR2690927
Publication date: 1993-11-12
Inventor: ALAIN DELACOUR; GERARD LASLAZ; MICHEL GARAT
Applicant: PECHINEY ALUMINIUM (FR)
Classification:
- **international:** C22C21/02
- **european:** C22C21/02
Application number: FR19920005760 19920506
Priority number(s): FR19920005760 19920506

Abstract of FR2690927

Casting alloy based on Al contains in wt.% 4-23 Si; at least one from 0.1-1 Mg; 0.3-4.5 Cu and 0.2-3 Ni; Plus 0-1.0.2 Ti; 0.1-0.2 Zr and 0.2-0.4 V.

Pref. the alloy belong to the group consisting of AA356, AA319, AA413; AA392 according to the names of the Aluminium Association.

USE/ADVANTAGE - Making cylinder heads and cylinders. The addition of Ti, Zr and V increases the hot creep resistance of the alloy without harming its ductility.
